Scientific Interests

- My research focuses on the physics of compact objects and radio transients with radio observations from large radio interferometers. I am interested in deep radio surveys that allow us to explore the time-variable radio sky (explosions, collisions, disruption events) and constrain the rates and the physical mechanisms that drive these events. I am also involved in execution of surveys with next generation telescopes (SKA precursors) such as MeerKAT and NenuFAR and I am particularly interested in advanced radio calibration and imaging techniques.

Employment History

- | | | |
|--------------|---|---|
| 2025 - today | • Associate Scientist. NRAO, Socorro, USA |  |
| 2022 – 2024 | • Assistant Scientist. NRAO, Socorro, USA |  |
| 2020 – 2022 | • Research Associate/PSL fellow. Paris Observatory, Meudon, France |  |
| 2017 – 2019 | • Research Associate. CEA-Saclay and Université Paris VII (Labex UnivEarthS), Gif-Sur-Yvette, France |  |
| 2015 – 2017 | • Research Associate. Michigan State University MI, USA |  |
| 2012 – 2014 | • Research Associate. Yonsei University Observatory, Seoul, S.Korea |  |

Education

- | | | |
|-------------|--|---|
| 2008 – 2011 | • Ph.D Physics, University of Cologne, Germany
Thesis title: <i>Spectroscopic studies on AGNs and High angular resolution in the NIR: The construction of an imaging beam combiner for the LBT</i> |  |
| 2002 – 2007 | • B.Sc. Physics, Aristotle University Thessaloniki
Thesis title: <i>HII regions detection in Local Group Census</i> |  |

Skills

- | | |
|----------------------|--|
| Languages | • Greek (native), English (professional working proficiency), German (elementary proficiency), French (beginner). |
| Astronomical Tools | • Virtual Observatory (VO) tools, AIPS, Difmap, CASA, DDFacet, WSClean, AOFlagger, GILDAS, SCHED, HEASoft (Swift/XRT tools), IRAF, SExtractor. |
| Programming | • Python, R language, IDL language for Visualization, Fortran, PHP, HTML, CSS, C-shell, AWK. |
| Databases | • MySQL, PostgreSQL, SQLite. |
| Graphics & Documents | • \LaTeX , Microsoft Office, Matplotlib, Mathematica, Matlab. |

Experience

- **Radio observations and data analysis.** Continuum data of MeerKAT, NenuFAR, Very Large Array (VLA), Australia Telescope Compact Array (ATCA), Korean VLBI Network (KVN), VERA (VLBI Exploration of Radio Astrometry), IRAM 30m, Effelsberg Radio telescope 100 meters.
- **Optical observations and data analysis.** Photometry and spectroscopy with Southern Astrophysical Research Telescope (SOAR 4.1m), 1.2m telescope Kryonerion Astronomical Station of the National Observatory of Athens, ESO 1m Schmidt telescope, 24-inch telescope MSU Campus Observatory, and several smaller scopes.
- **Infrared instrumentation.** LINC-NIRVANA - Near infrared imaging instrument for the Large Binocular Telescope (see PhD thesis for details).
